```
# This Python 3 environment comes with many helpful analytics
libraries installed
# It is defined by the kaggle/python Docker image:
https://github.com/kaggle/docker-python
# For example, here's several helpful packages to load

import numpy as np # linear algebra
import pandas as pd # data processing, CSV file I/O (e.g. pd.read_csv)

# Input data files are available in the read-only "../input/"
directory
# For example, running this (by clicking run or pressing Shift+Enter)
will list all files under the input directory

import os
for dirname, _, filenames in os.walk('/kaggle/input'):
    for filename in filenames:
        print(os.path.join(dirname, filename))

# You can write up to 20GB to the current directory (/kaggle/working/)
that gets preserved as output when you create a version using "Save &
Run All"
# You can also write temporary files to /kaggle/temp/, but they won't
be saved outside of the current session
```

```
/kaggle/input/int3405-sentiment-analysis-problem/test.csv
/kaggle/input/int3405-sentiment-analysis-problem/full_train.csv
```

```
 !pip install tensorflow==2.0
```

```

```

```
Mình đã đặt 2 phần bánh ở đây, bao gồm: 1 bánh sữa chảy Thái Lan và 1
bánh milo kem cheese, nhưng lúc giao hàng quán chỉ ship 1 phần bánh
sữa chảy Thái Lan trong tình trạng bánh vỡ nát. Mình đã phản hồi lại
với bên Nowfood và quán đã hứa là sẽ làm việc lại với mình.
Nhưng đến hôm nay, 2 ngày đã trôi qua và quán vẫn không có một lời xin
lỗi cũng như hoàn lại tiền cho mình.
Vậy tính chuyên nghiệp khi làm việc ở đâu? Liệu còn khách hàng nào có
thể tin tưởng khi sử dụng dịch vụ của quán?
```

```
Yêu câù quán xem lại thái độ làm việc cũng như tính chuyên nghiệp của
mình.

# Attention Layer
from tensorflow.keras import initializers,regularizers,constraints
from tensorflow.keras import backend as K
class AttentionWithContext(tf.keras.layers.Layer):
    """
    Attention operation, with a context/query vector, for temporal
data.
    Supports Masking.
    Follows the work of Yang et al.
[https://www.cs.cmu.edu/~diyiy/docs/naacl16.pdf]
    "Hierarchical Attention Networks for Document Classification"
    by using a context vector to assist the attention
    # Input shape
        3D tensor with shape: `(samples, steps, features)`.
    # Output shape
        2D tensor with shape: `(samples, features)`.
    How to use:
    Just put it on top of an RNN Layer (GRU/LSTM/SimpleRNN) with
return_sequences=True.
    The dimensions are inferred based on the output shape of the RNN.
    Note: The layer has been tested with Keras 2.0.6
    Example:
        model.add(LSTM(64, return_sequences=True))
        model.add(AttentionWithContext())
        # next add a Dense layer (for classification/regression) or
```

```
whatever...
